

XRT® Power Systems Introduces the XRT Smart Power Combi Power Generator

Marblehead, MA – XRT® Power Systems, a leading manufacturer of power systems for fire, rescue and industrial applications, announced today the XRT Smart Power Combi generator. Designed to provide firefighters and emergency response professionals with the power they need to run the tools they prefer. The XRT Smart Power Combi is for applications that need PTO power and variable engine RPM, like Pumps. The XRT Smart Power system will only use one PTO and will allow the operator to vary engine speed, such as allowing them to drive to the scene or during pumping operation. The rescue pump will be attached to the Smart Power generator and will free up critical space by the transmission PTO and in the compartments.

Unlike competitive systems that restrict operators by forcing them to use tools from one specific manufacturer, the patented XRT Combi ensures connectivity with rescue tools from all tool manufacturers, allowing response personnel the freedom to choose the best tools to meet their needs. The XRT Combi is capable of simultaneously powering up to three hydraulic cutting, spreading and extrication tools, as well as power lighting, reel tools and other electrical accessories up to the full rated generator output. Designed for installation on new vehicles, as well as trouble-free retro-fitting of vehicles already in use, the XRT Combi is easy to set up and operate and delivers the extremely fast response times that can literally make the difference between a safe rescue and a preventable tragedy.

“The XRT Smart Power Combi was developed to address the overwhelmingly frequent request for a single industrial power system capable of accommodating any and all hydraulic extrication tools on the market,” said Robert Hansen, president, XRT Power Systems. “Our innovative, patented design is the most versatile system on the market, consistently delivering the shortest time between arrival and extrication.”

The XRT Smart Power Combi is based on the Smart Power 1800 RPM Hydraulic Generator. It is available with 15 kW power, with other sizes to follow and is designed for quiet, cool, continuous duty running in even the worst conditions. The XRT® device delivers up to 10,500 pounds of pressure per square inch (PSI), and is designed to provide power for electrical devices as well as the simultaneous operation of rescue tools at distances up to 100 feet from the Combi unit. Specifications include a patented dual stage continuous duty pump, stainless steel high pressure fittings and a three gallon reservoir with built in filter. The Smart Power Generator provides the XRT with a solid platform and smooth reliable power. Their customer support and technical assistance has been proven to be vital in a seamless installation of the XRT Smart Power Combi.

Pricing & Availability:

The XRT Smart Power Combi generator is competitively priced for manufacturers and dealers and is currently available throughout the United States and Canada. For more information on the Smart Power Combi, authorized XRT Power Systems dealers, or to learn more about XRT Power Systems and their entire line of products please contact 800-343-0480 (toll free) or visit www.xrtcombi.com
